Imported Bulbs

(All Well Matured)

It is advisable to get your bulbs in the ground as early as possible, although they can be planted as late as they can be got in the ground. But those planted early give finer flowers, as it is necessary for bulbs to make some root growth in the fall to give the best results. Bulbous plants are among the most showy and useful of our garden, greenhouse and winter garden favorites, and with scarcely any exceptions, are easily managed, sure to bloom and require but little labor and care to enable them to produce their charming flowers. As winter-blooming plants they hold an important place as there is no period of the year during which flowers are so highly appreciated, and certainly no class of flowering plants afford more pleasure.

SINGLE HYACINTH

Our bulbs are all of large size and well matured, and being furnished in so many separate colors, splendid bedding effects may be produced with them. They are also admirably adapted for forcing in the greenhouse for winter cut flowers.

WONDERFUL

QUILLED DAISY PLANTS

Each **25c** Per Dozen **$2.50** Post Free

A New and Striking Novelty **Larger Than a Silver Dollar**

After many dissappointing failures, our ambition to produce a *quilled* daisy has been crowned with success, and the result amply repays us for all the effort and money we expended in bringing it to perfection. This remarkable plant is a very free and continuous bloomer. It begins to flower early in the spring, and from then on until late in the autumn is never barren of blossoms. The intensly brilliant red flowers are nothing short of magnificent. This is the only quilled daisy in existence. But that doesn't affect the price unpleasantly. As a matter of fact we charge very much less for it than other houses ask for the common sort. One of the first mercantile lessons we learned was the wisdom of saving money for our customers, and we never take advantage of opportunities to make excessive profits.

FERN

One of the most wonderful and beautiful plant introductions of the present age — and all the more wonderful when we consider that it is purely nature's handiwork, being a "sport" or "freak of nature" that sprang up in a greenhouse full of Boston Ferns. In habit of growth it is similar to the original type, but differs from it in that the pinnæ of division of each frond is, in turn, subdivided, making each pinnæ a perfect frond. When matured it has a feathery appearance and, taken altogether, it is one of the grandest and latest members of the fern family.

BOSTON FERN

Nephrolepis Bostoniensis

This grand new fern has become very popular. It is one of the very few plants that will thrive under ordinary house care. It grows well, and improves in size where all others fail. The fronds droop and arch gracefully over the edge of a pot or basket, and as it is a very rapid grower, it is not long before they reach the floor from an ordinary parlor table.

ODORLESS AND QUICK ACTING Lawn Dressing

5c Per Pound **3½**c Per Pound in 10 Pound Lots You to Pay Transportation

This is a clean, portable and convenient lawn dressing which we have found to be never-failing in inducing a rapid and rich green growth. It should be sown broadcast in the fall and spring. It is in every way more desirable than stable manure, which is unpleasant to handle, ill looking, offensively odorous, and often full of noxious weeds.

Quantity Required. A 10 pound package is sufficient to go over an area of 300 square feet. For a new lawn use from 1,000 to 1,500 pounds per acre, or half this quantity for renovating an old one.
